

# Pil Alarm System with Floating Sensor

## Effective fluid level monitoring when your sewage system threatens to overflow

The Pil Alarm System detects abnormal fluid levels with its omnidirectional switch and responds promptly with a powerful alarm until the preset fluid level has been restored to normal.

## Features

- Pre-assembled, one-piece system; easy to install
- Buoyant, non-corrosive PVC housing
- Encased in cyclolac ABS housing
- Field-proven 16/2 SJ0W cord, factory sealed to floating sensor
- Plugs into a standard 115v outlet
- Powerful 75-decibel alarm
- Display features alarm 'Disconnect' switch and power 'On' light
- Adjustable weighted clamp provides setting of surveillance position for particular overflow situation
- 1 Year Warranty

More information regarding Pil's low water system is available by contacting the manufacturer.

## Instructions

1. Determine the fluid danger level for the particular situation and slide the weighted clamp along the cord according to the provided chart which is included with the switch.
2. Suspend the floating sensor within the container of fluid.
3. Insert the alarm end of the system into the grounded outlet and flip the switch to 'On'.
4. The system is now activated and on guard.

For reliable, automatic operation in every situation, install a Pil Floating Switch with your pump.

Since their founding in 1976, WD Paramatic Industries Ltd. has been recognized as Canada's leading manufacturer in the field, supplying consistently reliable products on which contractors and homeowners alike have come to depend. With their commitment to quality, WD Paramatic Industries Ltd. ensures each and every product meets the highest standard in design, materials and performance.

# Pil Floating Pump Switch

**When reliable pump control is a priority for sumps, sewage, septic tanks or cisterns**

The Pil Floating Pump Switch automatically activates your pump with its dependable contact switch to keep fluid levels at your pre-determined setting. The Switch activates when the unit's angle changes due to the rise or fall of fluid levels and deactivates once the desired preset level of fluid is reached. Models are available for both 'pump up' and 'pump down' applications.

## Features

- Self-contained, pre-assembled, and factory-sealed; easy to install
- Shatterproof switch encased in durable factory-sealed (solvent welded) PVC housing
- CSA approved, 1/2hp - 115v - 15amp
- Plugs into a standard 115v outlet; pump plug piggybacks onto Pil's in-series PB-15 plug\*
- Field-proven 16/2 SJ0W cord
- Available in 5, 10, 15, 23 and 32 metre lengths
- Adjustable weight allows choice of pumping range to be changed at ground level\*\*
- 1 Year Warranty

\* 230v applications require special considerations.

\*\* The greater the distance from the switch, the more fluid can be pumped per cycle.

## Instructions

1. Determine the pump range desired according to the chart and slide the weighted clamp along the cord correspondingly.
2. Suspend the float switch within the container of fluid.
3. Insert Pil plug (piggyback plug) into grounded outlet, then plug pump into the back of the piggyback plug.
4. The system is now activated.

For complete fluid level monitoring, install a Pil alarm that will sound whenever an overflow threatens.
